# Braces Care Kit Instructions

Rotadent ProCare® requires a tooth-by-tooth brushing technique. The 360-degree rotation may cause the brush head to slip off of the teeth during use, particularly when first getting used to this technique. To help correct this, stabilize the handle with a firm grip. Next, follow the margins of the gumline to ensure proper cleaning of all surfaces, as described below:

- **Brushing Technique:** Hold your Rotadent ProCare® so the brush tip meets your gum line and the tooth surface at a 90-degree angle. To thoroughly clean each tooth, use the long-tip brush head and make "M" motions on the top teeth to massage the gumline and "W" motions on the bottom teeth.
- **Built-in Timer:** To make sure you brush evenly, divide your mouth into four sections (or quadrants). Brush each quadrant thoroughly for 30 seconds, as indicated by the QuadTimer.
- **Note:** Some individuals may experience a mild tingling sensation when first using the Rotadent ProCare®. This should stop after a few days of use.

## Mi Paste Plus™

- Brush with a fluoride toothpaste in the morning and at night
- Apply a pea-sized amount of Mi Paste Plus™ to your teeth's surface using a cotton swab or gloved finger
- Leave undisturbed for 3 minutes
- Expectorate (spit) but do not rinse; leave the excess to slowly dissolve
